

Nota Bene

Основные черты MVP (passive view)
можно заметить сразу:

- Минимум логики в ViewController.
- Вид нашего UI обновляется через Presenter.

- Инициализация и презентера, и его сервиса происходит в Viewcontroller

```
122 // MARK: - Presenter
123 extension PresentationViewController: PresentationView {
124     func setupInitialButtons() {
125         backButton.isHidden = true
126     }
127
128     func setupFinalButtons() {
129         nextButton.isHidden = true
130     }
131
132     func setupDefaultButtons() {
133         backButton.isHidden = false
134         nextButton.isHidden = false
135     }
136
137     func loadSlide(slide: Slide) {
138         if slide.type == .image {
139             playerController.view.isHidden = true
140             slideImageView.image = UIImage(named: slide.content)
141         } else {
142             playerController.view.isHidden = false
143             guard let path = Bundle.main.path(forResource: slide.content, ofType:"mov") else {
144                 debugPrint("video.mp4 not found")
145                 return
146             }
147             let player = AVPlayer(url: URL(fileURLWithPath: path))
148             playerController.player = player
149         }
150     }
151 }
```

```
72 private func setupSlide() {
73     presenter = SlidePresenter(presentationView: self, slideService: SlideService())
74     presenter?.initialSetup()
75 }
76
```
